**ENCLOSED** in this issue you will find timely information about OEC 9600 replacements, upgrades and a new Siemens CT replacement tube.

## OEC 9600 Imaging Replacements

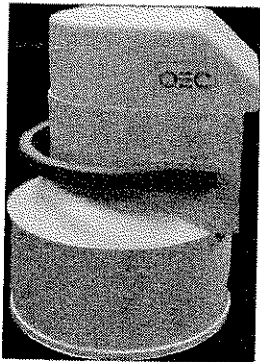

**Better hang on to that OEC 9600:** Saving money isn't the only reason to hang onto that OEC 9600. Consider an upgrade package from Imaging Affiliates. It may be some time until OEC is permitted to sell new c-arms and if you were counting on trading that old 9600 in on a new one, you may have to wait a long time due to the recent consent decree that the FDA and OEC entered into that has resulted in the suspension of new

shipments until OEC's problems are resolved. See the news here:

<http://www.fda.gov/bbs/topics/NEWS/2007/NEW01547.html>

With OEC's decision to make the 9600 Obsolete effective 12/31/2006 and End of Life at 12/31/2007, many facilities were looking at replacing these units with newer ones. Thanks to Imaging Affiliates, this won't be necessary. Not only can you replace your Thales HP image intensifier with a new one, but you can improve your image quality with the higher performance QX version or replace your camera with a new CCD camera for even

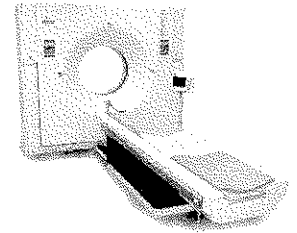

better resolution.

Imaging Affiliates is also your source for replacement x-ray tubes, monitors, foot switch, hand switch, inter-connect cables and a new high voltage power supply for the 9600's.

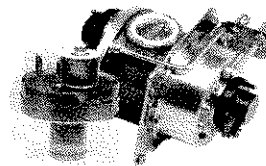

Call us and we will be glad to tell you how to extend the life of your 9600 and improve image quality.

## New Siemens CT Tube

**Imaging Affiliates** previously announced the availability of the Siemens Akron B and Q CT Tubes. We are proud to announce the latest addition to our Siemens CT Replacements. The new Dura 502 tube is available right now. This tube is used on the Siemens Somatom Plus 4 series of CT scanners.

One of the important features of this tube, is an improved high-speed bearing design that should provide longer tube-life than you have been accustomed to. We are also providing the Manufacturer's Warranty that protects your tube against those financial aberrations that give us all grief. Hmmm, improved life, lower cost, connect the dots! Call **Imaging Affiliates** today and let us tell you the good news!

## High Voltage Cables

Don't wait until you have a failure to replace those old high voltage cables. Cables with damaged shields can be deadly to your high-frequency generator and result in lower x-ray tube life as well. A good set of high voltage cables is very inexpensive when compared to a x-ray tube or high-voltage inverter. Call **Imaging Affiliates** and save unnecessary down-time and money by replacing those old high-voltage cables.
